

WAGON WHEEL RANCH

Registered Angus Since 1950

CATTLEMAN'S CONNECTION ANGUS SALE

Tuesday, 1:00 p.m. (MST)

MARCH 9, 2010

At the Ranch, Yuma, CO

3 1/2 Miles South of Yuma on Hwy. 59

Welcome to the 2010 Wagon Wheel Ranch Cattleman's Connection Sale!

Dear Cattlemen,

Welcome cattlemen and friends to the 2010 Wagon Wheel Ranch Cattleman's Connection Production Sale. Our sale offering represents the best in our herd and the type of cattle our program is producing. We are not afraid to use a knife if these bulls don't fit the profile of thick topped, deep sided cattle in demand by the majority of cattle feeders. Check out the carcass quality of the entire group and you will see uniformity throughout. A good number will also be available to choose from with substantial calving ease ability as well.

These bulls have been on a high roughage diet so you can expect them to be range ready and able to travel well. Longevity is another trait we value highly from our bulls.

The 50 head of females are of the same base breeding as our registered herd and are a very uniform group of heifers - start to finish. They will be sold in lots of 5 with choice by first buyer and then option for next buyer to step in for same money and choice 1 more time. Next buyer cleans the ring.

Stop by and preview the lots and you will see we are proud of what we produce here.

Thanks for participating,

Kenny Rogers and the entire Wagon Wheel Ranch crew.

Kenny Rogers

CATTLEMAN'S CONNECTION ANGUS SALE

Sale Day Phones
970/848-0676
or
970/630-0600

Tuesday - 1 p.m. (MST)
March 9, 2010

SALE LOCATION: Wagon Wheel Ranch, 34346 Hwy. 59, Yuma, Colorado. 3 1/2 miles south of Yuma on Hwy. 59.

MOTELS:

Harvest Motel, Yuma, CO.....970/848-5853
Sunrise Inn, Yuma, CO.....970/848-5465
Nelson Inn, Yuma, CO.....970/848-2774

TRANSPORTATION:

Yuma Municipal Airport is 1/2 mile south of Yuma, CO.

INSPECTION OF CATTLE:

Cattle can be viewed at the Ranch anytime prior to the sale. Call for an appointment.

TERMS & CONDITIONS:

Cash. Please settle for cattle promptly. All cattle sell according to the Terms and Conditions of the American Angus Association.

RETAINED INTEREST:

Wagon Wheel Ranch will retain 1/2 semen revenue sharing interest in all of the bulls in this sale. The buyer has full possession and salvage value of the bull at the end of his useful life.

HEALTH:

Interstate health papers and brand release papers will be provided on all cattle selling. All bulls sell fertility tested and with scrotal measurements. Heifers are bangs vaccinated.

TRUCKING:

We will deliver on total purchases of \$2000 or more to central locations within 250 miles. We will also be glad to assist in making the best possible trucking arrangements.

INSURANCE:

Will be available sale day. At this time the First Breeding Season Loss of Use insurance has been discontinued by the insurance company. We have arranged for American Livestock Insurance Co./Harding and Harding to make available traditional full mortality coverage which provides coverage for death from natural causes. This coverage will be available SALE DAY for those who choose to insure their purchases. All claims will require a veterinarian's exam and immediate notification to the insurance company. A representative from the insurance company will be available on sale day to answer any questions you may have.

LIABILITY:

All persons attending this sale do so at their own risk, legal or otherwise, for their safety or the behavior of the animals. The Owners, Auction Service and the Sale Staff assume no liability for property loss or accidents that may occur.

Cattleman's Connection

AUCTIONEER: Al Conover 641/227-3537

◆ This bull has calving ease written all over his pedigree. He is a low birth weight bull that's extra long bodied and level topped.

Taking Care of Your Bull

Remember, the bull(s) you buy are only one year old and are still growing. Protect your investment by feeding your bull well. You should feed 5 to 10 lbs. of grain, 1 to 2 lbs. of protein supplement and free choice hay to allow your bull(s) to adequately develop. Supplemental feeding during breeding season is recommended if possible. After breeding season, continue to feed liberally so the bull will grow out well. All bulls selling have been getting plenty of exercise and have passed a breeding soundness examination; however, there is a natural limit to what can be expected of them.

Answers to your questions

Arthrogryposis Multiplex (AM)

Producers who use Angus genetics can be assured that they are buying the best product available. Advanced technology and rapid DNA-testing has made more information available than ever before.

Arthrogryposis Multiplex (AM), commonly referred to as Curly Calf Syndrome is a lethal genetic defect with a simple recessive pattern of inheritance.

Commercial cattlemen should be aware of AM, and the genetics that trace back to AM so that proper breeding decisions can be made, but there is no need for undue concern.

Definitions

AM carrier (AMC) Any animal that has been tested and carries the recessive AM mutation in its DNA

AM non-carrier (AMF) Any animal that has been tested and determined to be free of the AM mutation

AM affected (AMA) A stillborn calf with a spine that is bent or twisted, that appears small and thin and has legs that are often rigid and may be hyper-extended

Angus producers are continually testing their herds, and a list of those results are posted to the American Angus Association Web site, www.angus.org.

Since AM is a simple recessive inherited defect, only a single pair of genes controls the condition, much like red vs. black coat color in the Angus breed.

Animals can be carriers (AMC) and when they are mated with other carriers (AMC), have a 25% chance of producing an AMA calf. However, when two carriers are mated, there is also a 25% chance that a non-carrier (AMF) live calf will be born and a 50% chance of producing a live normal-appearing carrier (AMC).

It is important to know whether an animal is AMC or AMF when making your breeding decisions. Carriers appear normal. The only way to tell if an animal is an AM carrier is to have a DNA-based test performed by an authorized lab (listed on Association Web site).

If you have bloodlines in your herd that you know trace back to carriers, you will want to select and purchase a bull that has been tested AMF to ensure that AM does not affect your operation. Irrespective of its pedigree, an animal that has been tested and found to be AMF did not inherit the mutation and will not carry or transmit this genetic defect to its progeny. If a cow has an AMA calf, it means that the cow is an AM carrier, and that the sire she was bred to also carries the AM mutation.

AMC x AMC =

- ¼ normal-appearing non-carrier (AMF)
- ½ normal-appearing carrier (AMC)
- ¼ (AMA)

If a carrier (AMC) is mated to a non-carrier (AMF), then all of the progeny will be normal appearing, but half of them will be carriers (AMC).

AMC x AMF =

- ½ normal-appearing non-carrier (AMF)
- ½ normal-appearing carrier (AMC)

If you do have cows in your herd that trace back to bloodlines that have known AM genetics, the goal would be to use bulls without AM genetics in their pedigree or tested free (AMF) bulls. If you breed your AM influenced cows to unrelated or tested-AMF bulls, you eliminate risk of having an AMA calf. Females that are tested AMF, and bred to AMF bull will never produce AMC or AMA calves.

Be sure to ask your seedstock supplier about the status of the bulls or females he or she is selling, and buy your next Angus genetics with confidence!

50 Commercial Angus Heifers

This selection of commercial Angus heifers carries the same genetic excellence as the foundation Wagon Wheel Ranch cow herd. They sell as an attraction for our many respected commercial customers. These heifers offer high carcass genetics and represent the Wagon Wheel Ranch breeding program selected for calving ease, milking ability, fleshing ability, rebreeding performance and longevity. These heifers will be sorted in uniform groups of five head and each group will have one choice selection with the option to pick from 1 to 5 heifers. After the first selection, we will sell the remaining heifers in that group. Current weights will be available sale day. Weights will range from 650 to 800 pounds.

How to Read the Information in this Sale Catalog

EPDs:

Expected Progeny difference (EPD) is the prediction of how future progeny of each animal are expected to perform relative to the progeny of other animals listed in the database. EPDs are expressed in units of measure for the trait, plus or minus. Interim EPDs may appear on young animals when their performance has yet to be incorporated into the American Angus Association National Cattle Evaluation (NCE) procedures. This EPD will be preceded by an "I", and may or may not include the animal's own performance record for a particular trait, depending on its availability, appropriate contemporary grouping or data edits needed for NCE.

Production

CED: Calving Ease Direct (**CE**), is expressed as a difference in percentage of unassisted births, with a higher value indicating greater calving ease in first calf heifers. It predicts the average difference in ease with which a sire's calves will be born when he is bred to first calf heifers.

BW: Birth Weight EPD (**BW**), expressed in pounds is a predictor of a sire's ability to transmit birth weight to his progeny compared to that of other sires.

WW: Weaning Weight EPD (**WW**), expressed in pounds is a predictor of a sire's ability to transmit weaning weight to his progeny compared to that of other sires.

YW: Yearling Weight EPD (**YW**), expressed in pounds is a predictor of a sire's ability to transmit yearling weight to his progeny compared to that of other sires.

Maternal

Milk: Maternal Milk EPD (**Milk**), is a predictor of a sire's genetic merit for milk and mothering ability as expressed in his daughters compared to daughters of other sires. In other words, it is that part of a calf's weaning weight attributed to milk and mothering ability.

Ultrasound:

MARB: Intramuscular Fat EPD (**MARB**), is a predictor of the difference in a sire's progeny for percent intramuscular fat in the ribeye muscle compared to other sires.

RE: Ribeye Area EPD (**REA**), is a predictor of the difference in square inches of ultrasound ribeye area of a sire's progeny compared to the progeny of other sires.

Fat: Fat Thickness EPD (**FAT**), expressed in inches, is a predictor of the difference in ultrasound fat thickness of the 12th rib of a sire's progeny compared to the progeny of other sires. It includes the weighted average of 60% of the rib fat measurement and 40% of the rump fat measurement.

%IMF: Percent intramuscular fat is the percent fat in relation to amounts of marbling based on the USDA Quality Grading System. To estimate the steer progeny equivalent for marbling at the finished state, take the bulls percent marbling and add 2 to 2.5%

RE: An ultrasonic measurement of the rib eye area in square inches and adjusted to 365 days of age.

BF: An ultrasonic measurement of the fat depth in inches of an animal over the 12th rib adjusted to 365 days.

\$Values:

\$Values are multi-trait selection indexes expressed in dollars per head, to assist commercial beef producers by adding simplicity to genetic selection decisions. A \$Value has meaning only when used in comparison to the \$Value of another animal. For example, just as with EPDs, variation in \$Values between animals indicates average expected differences in the relative value of progeny if random mating is assumed and the calves are exposed to the same environment. **Weaned Calf Value (\$W):** An index expressed in dollars per head, is the expected average difference in future progeny performance for preweaning merit. \$W includes both revenue and cost adjustments associated with differences in birth weight, weaning direct growth, maternal milk and mature cow size.

Feedlot Value (\$F): An index expressed in dollars per head, is the expected average difference in future progeny performance for post weaning performance compared to progeny of other sires.

Grid Value (\$G): An index expressed in dollars per head, is the expected average difference in future progeny performance for carcass grid merit compared to progeny of other sires.

Beef Value (\$B): An index expressed in dollars per head, is the expected average difference in future progeny performance for post weaning and carcass value compared to progeny of other sires. The \$B value combines the contributions of \$F and \$G.

Stars: You will notice some bulls have a star rating of 1 to 3 stars above their lot number. That ranking is a calving ease score based on the individual's actual birth weight and BW EPD. A 3 star rating is a top calving ease herd bull prospect. Be sure to choose bulls based on your herd requirements.
